Table Of Contents

03	SWOT
04	NOTES (website in general)
05	NOTES (identity)
05	NOTES (content)
06	NOTES (landing page)
07	SUMMARY

**STRENGTH**

- unique idea with not much competitors (hosting and domain ranking websites)
- simple website
- plenty of content and articles
- strong seo

**WEAKNESS**

- website design
- unorganized content

**OPPORTUNITY**

- adding more features to the website
- using another tool to build the website
- creating more content
- creating better identity

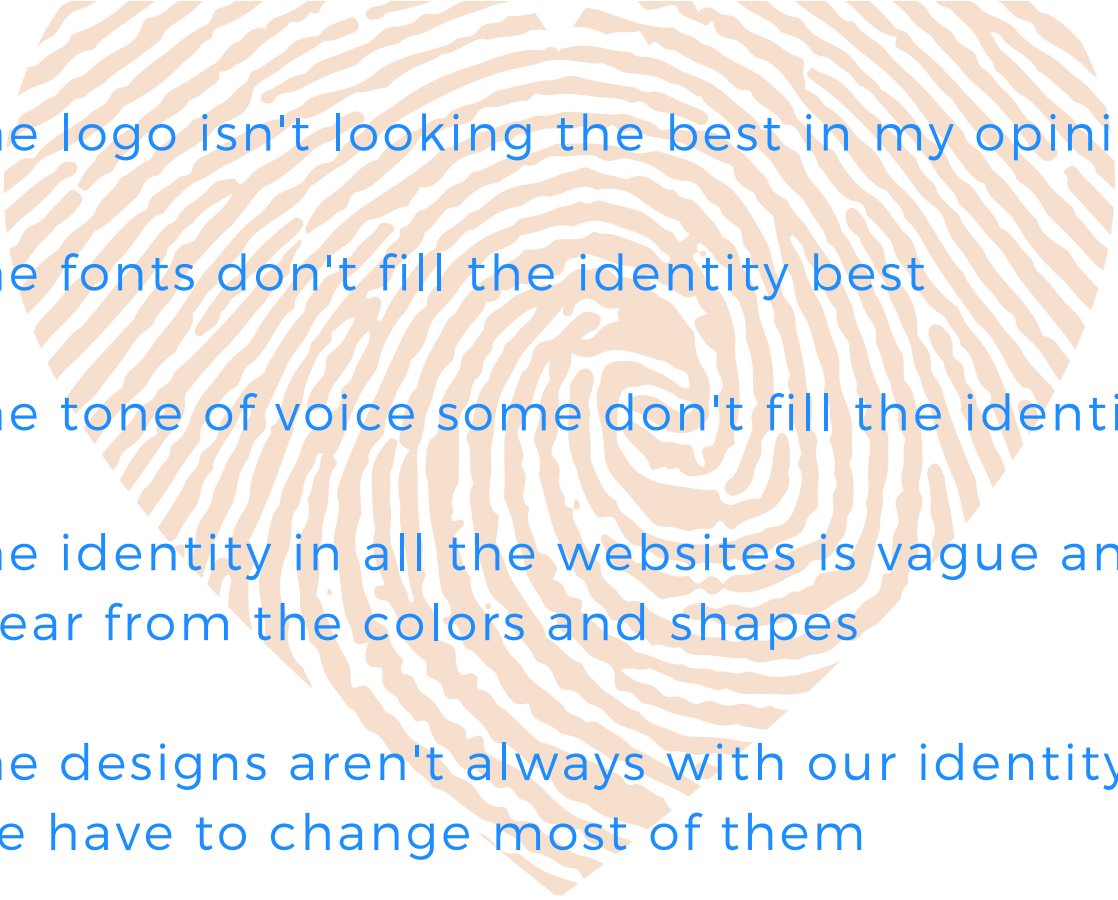

**THREAT**

- competitors entering the market
- financial issues

1- WEBSITE IN GENERAL

- the organization between paragraphs isn't the best and not clear
- the designs within the website aren't the best looking nor high quality
- neither completely following our identity
- there are two menus and headers
- some topics are repeated between the header, the best articles, and the best hosts
- using the blue for marking links is way too old to be used in every link on the page
- I think articles can be divided and viewed in a better way
- the design is responsive but not working and looking best on the phone and tablet

2- IDENTITY

- 
- the logo isn't looking the best in my opinion
 - the fonts don't fill the identity best
 - the tone of voice some don't fill the identity
 - the identity in all the websites is vague and not clear from the colors and shapes
 - the designs aren't always with our identity so we have to change most of them

3- CONTENT

- the content is generally good
- sometimes it's too long
- there are some spelling mistakes

4-LANDING PAGE

- the user flow is vague so we have to build a flow chart of how the user should enter the website and what next step they should do
- a landing page is full of text with no pictures or very few to support that text and add more value to it (less is more)
- the main navigation menu is ok but in the landing page keeping it in the top may distract them creating lead generation friction or the risk of them leaving the website without continuing the articles
- there's no encouragement for social sharing to Facebook or any other social media
- we can have more landing pages one for each category
- the comment section looks big we can compress it to look easier for the user to fill

07 EXECUTION SUMMARY

1- creating new content plan

2- creating a new full identity

3-optimizing our landing page

4- create a ux flow

5-add more features to the website

6- A/B test and analyze the results
